

Time Is Money

Are you tired of standing around with a hair dryer trying to get your sample boards dry enough to apply the next step to your process?

Are you tired of hanging your sample boards up and "watching paint dry"?

Are you tired of staying up late trying to get sample boards finished for clients that have multiple layers of paint and glazes?

We have the solution for your problem.....A custom built drying cabinet that will dry boards in a fraction of the time it currently takes you.

You can now build complex finishes with multiple layers of products in a fraction of time.

The drying cabinet will eliminate the possibility of "wet boards" touching each other during the old way of drying sample boards, hanging them up in a room.

The drying cabinet dries boards evenly throughout your finish with the manifold that directs the airflow throughout the cabinet.

The drying cabinet is patent pending and the heater assembly is UL approved.

Cabinet fits standard size boards 22 X 28; Custom sizes are available

Drying Cabinet Specifications

Voltage----- 120V 60Hz

Amperage----- Max continuous draw (at highest heat setting) 12.5 amps.
Minimum draw (fan only)..... .2 amps

Output.....5,200 BTU

Power (Low).....1,000 watts
(High)1,500 watts

Turbo fan multi blade low noise 2550 rpm

1500 watts with 2 heat settings

Overheat thermal protection

Thermostat control

1 year limited warranty
